

PARETO

PEER TO PEER FINANCIAL CONTENT

Getting objective financial information is hard, especially in the digital currency markets.

Pareto changes the incentive model around information, improving a **\$16 billion** industry of capital market research.

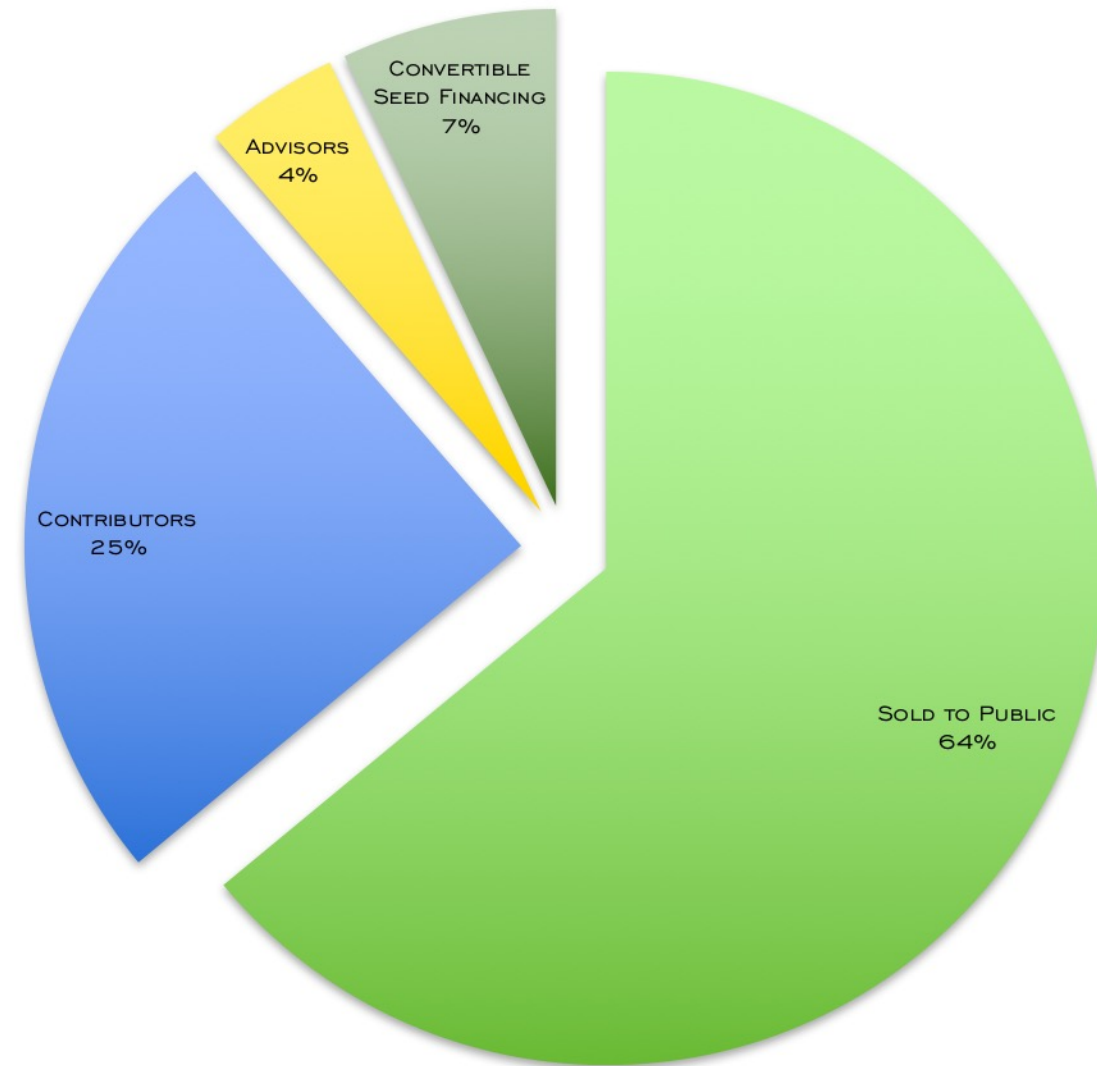

How the Pareto Token is initially distributed

The Pareto token (Pareto) is a digital currency just like Bitcoin or Ethereum.

Ownership of Pareto is the only way to access the Pareto peer to peer network.

Your active use of Pareto influences the quality of information you receive from the network.

Higher quality information gives you access to trading opportunities that have – until now – been reserved for the most elite fund managers.

Total Supply: 500,000,000 tokens

AT THE SURFACE OF DIGITAL CURRENCY INFORMATION

Content contributors provide financially tradable information.

contributors in the Pareto Network do not need to be market analysts, quants, or machine learning experts.

Any one that learns of market moving information can contribute to the Pareto Network, without the risk and experience needed to trade on their own, along with all of the Privacy assurances that the blockchain allows.

BROUGHT TO LIFE BY

Eric Lamison-White
Co-Founder & CEO.

UMBC, Bowie State BS | Cryptocurrency developer since 2013, Manager of Blockchain Development Company, Former FDIC investigator, 8+ years of software development and engineering management
